

Energizing the Community

**Cuivre River Electric Cooperative
Office and Operations Building**
Lake Saint Louis, Missouri
Architecture by Mitchell+Hugeback

New Cuivre River Electric Cooperative facility accommodates equipment, office space, an emergency command center... and the occasional Cub Scout den.

When the client said:

We've outgrown our old facility. We need space that is conducive to supporting our members, and we want to lead by example when dealing with energy efficiency and community service.

We heard:

Provide space for administrative staff, operations and essential equipment. Include space flexible enough to accommodate civic groups and after hours functions. Use construction methods and materials with a proven life cycle value.

We delivered:

A modern, spacious facility incorporating energy efficient and sustainable design elements based on "green" principles, plus disaster ready equipment bays, room for expansion... and room for the community.
